Youtube Stats

Hassan Sheikh, Jordy Tello, Chris Pulicken, Tristan Hsieh, Brennan Wilkins

Purpose

Our goal for creating this internet database was to emulate how YouTube works through its videos, playlists, and channels. This also helps users to analyze the statistics involved with how YouTube works as well.

Our IDB includes Videos, Channels, and Playlists.

Demo

And now for a demonstration...

Critique of our own site

- Good job at finding information

- Learned how to store different types of information

- We could have organized the information a little bit better

- We were puzzled by how to get the pages sortable

Critique of sharktankdata.me

What did they do well?
- The splash page is really visually appealing
What did we learn?
- We learned some about site content (business deals)
- We learned a different way to present the site on the splash page
What could they have done better?
- They could have made the site a little more complete
- Fix broken links (search feature, coverage results, link to home page)
What puzzles us?
- I'm not quite sure what the three entity types are
- The nav bar is a little confusing
